DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-20 are rejected under 35 U.S.C. § 112, first paragraph, as based on a disclosure which is not enabling. Circuitry corresponding to charging transistors 50 in Fig. 5 is deemed critical or essential to the practice of the invention, but is not included in the claim(s). An arrangement lacking this feature is not enabled by the disclosure since it cannot be understood from the specification how the circuit will operate without such. As seen, it would be impossible for the capacitors to charge without such circuitry. *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not understood how the circuit can operate without the above-discussed critical feature.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2816

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsai (USPAP 2002/0130703).

With respect to claims 1-16, Tsai discloses, in Fig. 5, a circuit comprising: “a first clock signal (Vphi1 provided to the capacitor in 116)”; “a second clock signal (Vphi2 provided to the capacitor in 108)”; “a first capacitor (capacitor in 116)”; “a second capacitor (capacitor in 108)”; “a first former-stage clock signal (Vphi1 provided to 124)”; “a second former-stage clock signal (vphi2 provided 132)”; “a first former-stage capacitor (132)”; “a second former-stage capacitor (124)”; “a first switching circuit (128)”; “a second switching circuit (120)”; “a first current reversing circuit (CMOS arrangement connected to the gate of 134)”; and “a second current reversing circuit (CMOS arrangement in 108)”, all connected and operating similarly as recited by Applicant. The reference to Tsai expressly discloses that that the clock signals are non-overlapping.

With respect to claims 17-20, clearly the above circuit to Tsai will provide the recited method.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference is specifically made to the reference of Thorp et al.
